Questions for the Client / Organizer

Decisions and materials BOSS needs from the organizer before it can be relied on. Please write your answer in the last column.

#	QUESTION	WHY I NEED IT	ANSWER
1	Can you give me **result sheets from past competitions**, showing the marks of every adjudicator?	I want to check that BOSS gives the same results as your paper sheets. So far I have only tested it with examples from a guidebook.	
2	If a final ends in a **tie that cannot be broken**, what do you do?	BOSS lets the chairperson choose: keep the shared place, or use an order typed in by the scrutineer. Please confirm this is how you do it.	
3	What are the **age group limits**?	BOSS works out a dancer's age group from their birth year. The limits must match your rules.	
4	Which **WDSF rulebook** (and which year) do you follow?	I need to check BOSS's scoring against the same rulebook you use.	
5	Which **paper forms** do you still need printed?	BOSS already prints heat lists, qualified lists, score sheets and final results. Tell me if you need anything else.	
6	How should I message teams: through your **Facebook Page**, by **SMS**, or both?	BOSS can message a team when their payment is approved or rejected. Facebook is ready to use, but I need to test it with your real Page, and Facebook may need to approve it first, which can take weeks, so please tell me early. SMS is not built yet and the mobile network charges for each message. Tell me if you want it.	
7	How should **teams register** for a competition? Should each team have an **account**, or do you prefer another way?	Right now each team makes its own account with a password, adds its dancers, chooses the events and sends proof of payment for you to check. Tell me if you want this, or if you prefer something else, such as the secretariat entering the teams, or a simple form with no account. Tell me how teams register today and any suggestions.	

Recommended Hardware

Specific models (prices checked October 2026 from online price lists; confirm on Lazada, Shopee or the brand store before buying)

10 adjudicator phones, budget ₱45,000 (about ₱4,500 each)

RANK	MODEL	PRICE	10 PHONES
1 (recommended)	**Xiaomi Redmi A5, 4GB RAM / 128GB**	**₱4,099**	**₱40,990**
2	POCO C71	₱3,699 to ₱4,499	₱36,990 to ₱44,990
3	TECNO Spark Go 2	₱2,999 to ₱3,299	₱29,990 to ₱32,990

Why these phones are enough

NEED	REDMI A5 (4GB/128GB)	POCO C71	TECNO SPARK GO 2
Android 15 with current Chrome	Yes	Yes	Yes
Screen	6.88 inch, 120Hz	6.88 inch, 120Hz	6.67 inch, 120Hz
Battery	5,200mAh	5,200mAh	5,000mAh
Memory and storage	4GB / 128GB	4GB / 64GB, or 6GB / 128GB	4GB / 64GB
Chipset	Unisoc T7250	Not confirmed	Unisoc T7250

- **Redmi A5 (recommended):** The biggest screen with the most storage at its price. 128GB leaves plenty of room for the offline copy and any unsent marks. The large screen suits the 56px touch targets, and the 5,200mAh battery should last a full competition day with the screen on.
- **POCO C71:** Same screen and battery as the Redmi A5. Check which version you are buying: the 64GB model is enough for BOSS, but 128GB gives more room. Its chipset could not be confirmed, so test one before buying all ten.
- **TECNO Spark Go 2:** The smallest screen and battery of the three, but it still runs a web page like this. It is the choice if the budget has to stretch to spares.

What could still go wrong

- **Slow chipset:** All three are entry-level. A page should load and respond fine, but a very slow phone could lag when the marking list is long (a final with many couples). Test with the biggest event before buying the rest.
- **Chrome updates:** Install Chrome and update it before the event. Turn off automatic updates on the day so nothing restarts mid-round.
- **Battery over a long day:** Charge to full the night before. Turn the screen brightness down and close other apps.
- **Wi-Fi:** These phones are the cheapest part of the chain. A weak router drops connections more than a weak phone does. Marks are held on the phone and sent again after a drop.

Battery life

These are estimates, not measured results. The phones have not been tested with BOSS.

- **Estimate:** about 10 to 14 hours with the screen on and Wi-Fi connected, running a page as light as BOSS. The Redmi A5 and POCO C71 (5,200mAh) should be about the same. The TECNO Spark Go 2 (5,000mAh) a little less.

How to measure it

1. Charge one Redmi A5 to 100%.
2. Open BOSS on it with the screen on, at the brightness used at the venue.
3. Leave it for a few hours on a sample round and note the percentage drop.
4. Multiply that out for the full day.
